

HNE Portable Firefighting - Special Applications

Based on HNE's patented extinguisher technology a variety of special solutions, dedicated to its specific applications have been developed in recent years. Police forces, for example, require light-weight and effective extinguishing units, that can be taken to any mission and which can be refilled after every use. That is why the German police choose HNE solutions, as those characteristics are the essential features of the complete product line. Efficient, robust, persistent and refillable at site. The 2 and 4 litres units are weight- and pressure optimized extinguishers, which form an

integral part of the equipment for forces, that face fire risks at demonstrations and major events. Firecrackers, Bengal torches and signal rockets constitute an enormous hazard for participants, spectators and security guards. The HNE police extinguishers are always carried along, ready for immediate defense of such hazards. The extinguishers are supplied with a universal filling device, a compressed air-bottle and several portion packs of the extinguishing agent. All this is delivered in a solid aluminum case, which fits in every intervention vehicle.
